Matter*

The **MedBed** EFFECT

Self-healing with
Quantum Energy

TEASER

AURUM

90.10.

The World's first Book of Intelligent Matter

*Incredible: Matter can be given intelligence!
A sweater, for example, or a bed.*

Dear reader, in your hands you now hold a book whose matter has been given intelligence by a quantum entanglement carried out in advance via the 90.10. procedure. By this measure it has become a kind of energy book.

However, it is an energy book only if you want it to be. If you only want to read the book like any other conventional book, you don't have to do anything. But if you want to activate its abilities, you can do it now by meeting two requirements.

The first requirement is that you are the owner of the book. You have bought it or received a voucher code. You meet the second requirement by registering at 90.10. with your first name, last name and e-mail address. Thereby you are known as the owner

of the book in the quantum network and your consciousness is integrated into the process of quantum entanglement. This is necessary for the functionality. Working with this book, as with all other 90.10. products, is working with consciousness.

Consequently, another person, your partner, mother or friend, cannot activate this book, because his/her consciousness is not involved in the process of quantum entanglement, since he/she has neither bought the book nor is known in the quantum network as the owner of this book.

This opens a direct access to all the possibilities, that Intelligent Matter already offers you today. But first of all, we will take you – if you wish – into the adventurous world of quanta. After that these introductory sentences and our promise will no longer seem so adventurous anymore.

ANNE HILD:

Quantum Physics

Beyond our everyday reality lies a breathtaking world, a cosmos full of mysteries, which shook the traditional picture of this world among many physicists about a hundred years ago. As Werner Heisenberg said: “If you want to understand what holds the world together at its core, you have to know something about its smallest particles”. It’s the cosmos of quantum physics.

Quantum physics deals with the behavior and interaction of the smallest particles, which make it possible to observe the processes in the subatomic world. It has long been scientifically proven that in the end all matter is a manifestation of energetic states that vibrate at certain frequencies. You could say that what we notice as matter is actually only condensed energy. Everything – we humans, but also every cell as the smallest component of the organism, and even the universe – consists of energy that vibrates at a specific frequency. Starting with physically measurable energy up to the speed of light. Energy cannot be destroyed, it can only be transformed.

In quantum physics the world does not exist independently of us – we are co-creators of our reality. Depending on the observation, the elementary particles of matter appear to be limited particles sometimes and an expanding wave at other times.

In quantum physics, everything is described as energy and vibration, since all particles also have the properties of waves. At a closer look, this also applies to us humans. We are independent individuals, comparable with the particles. But each of our actions spreads like a wave in space and time. The strange thing is that the laws of quantum physics (quantum mechanics, quantum theory) are valid for everything in the universe – for the atom and the subatomic particle as well as for the planets and stars, for the solid matter and us human beings.

In the world of quantum, objects or things are strangely reluctant to be pinned down to a single location. But that's not all. It seems that objects are in several places at the same time.¹ Quantum physics wants to provide us with evidence that the outcome of an observed event can be influenced by the observer himself and by his expectations. Then there is the thing with the cat. You have probably heard of Schrödinger's thought experiment², according to which a cat can be both dead and alive. All this seems totally absurd. Nevertheless, for over 75 years, physicists have been using quantum physics to predict how atoms and subatomic particles behave. Countless experiments and tests have been repeated many times and could never be proven wrong. There are literally billions of proofs of quantum mechanics. And it is these "crazy" laws that determine how our world works at its core.

Who "invented" or, rather, discovered these strange laws that seem so paradoxical? Before quantum physics was a topic, physicists were able to accurately predict the behavior of cer-

1 More on quantum entanglement in the next chapter.

2 Explanation of Schrödinger's Cat on YouTube in a 3:36 minute video, <https://www.youtube.com/watch?v=QFP1Ci8Dabl> (October 2022).

tain things, such as the way planets orbit the sun or how waves travel on water, by looking at the laws of physics in classical mechanics. It seemed perfect, it all made sense, until the early 20th century, when a group of scientists came up with radically new ideas about physical reality. Among them were such famous people as Max Planck, Albert Einstein, Werner Heisenberg, Niels Bohr, Erwin Schrödinger and David Bohm, to name just a few.

Max Planck and Albert Einstein are considered the founding fathers of quantum theory. It began in 1900, when Max Planck derived the mathematical law of the thermal radiation of a black body, according to which light is both an electromagnetic wave and a particle. This was revolutionary! In 1905, Albert Einstein proved that light consists of quanta. Although Einstein created the foundations for quantum physics, he could not fully stick to them throughout his life, as they conflict with the realistic view of the world and state that there is a coincidence in the quantum world that goes far beyond what we accept in everyday life.

One of the great ones, perhaps the greatest, is Werner Heisenberg³...

Quantum Entanglement – Spooky Action from Afar

Let us now turn to quantum entanglement, another phenomenon which at first seems totally crazy. Yet entanglement is one of the most fascinating and important phenomena in quantum physics. Erwin Schrödinger introduced the term “quantum entanglement”. It is of outstanding importance for information transmission. However, entanglement can neither be reconciled nor understood with classical physics.

Many quantum-physical experiments have contributed to the seemingly odd nature of the quantum world. Two entangled particles remain magically connected over an arbitrary distance.⁴ They are entangled, have perfectly defined common properties. Although light years away, they both literally change at the same moment. That is, two or more particles are entangled in such a way that any change in one particle instantly affects the other. It seems that one connected particle is magically aware of something having changed in the other particle.

But there is nothing obvious which connects these two particles.

So far only the principle of cause and effect was known, and the effect could be clearly calculated in advance. The phenomenon of entanglement is scientifically recognized today but back then it caused the building blocks of physics to collapse. Jeff Kimbley, a renowned U.S. quantum physicist, describes it humorously:

⁴ Explanation of quantum entanglement on YouTube in a 9:15 minute video, <https://www.youtube.com/watch?v=ZuvK-od647c> (October 2022).

“Entanglement means if you tickle one the other one laughs.” But Einstein dismissed it as “spooky action at a distance” (so-called non-locality). He said it was contrary to common sense. John Bell has ended the stand-off over the issue of “spooky action at a distance” and proved Einstein wrong. He said: “Bohr was inconsistent, unclear, willfully obscure and right. Einstein was consistent, clear, down-to-earth and wrong.”

In 1993, Prof. Dr. Anton Zeilinger and his team succeeded in teleporting a photon for the first time. Ever since, he is nicknamed “Mr. Beam”. He transferred the exact quantum state of one light particle to another. It was thus a very special form of data transmission. Zeilinger said: “The exciting thing about quantum physical teleportation is that we only transfer the properties of a system and not the matter of which the system consists. And yet we can claim that in that place to which we teleport we have the original. That, of course, raises quite deep philosophical questions.”⁵

In an experiment carried out in 2004, Zeilinger and his team succeeded in teleporting particles across the Danube river, which corresponds to a distance of 600 meters. Later, they managed a teleportation between the two Canary Islands of La Palma and Tenerife (140 km) in 75 seconds, showing that distance does not matter. However, Zeilinger believes that it is unlikely to teleport a whole person in the near future. He has still demonstrated the phenomenon of entanglement impressively through an experiment that was published in Nature Physics and other scientific magazines.⁶

Zeilinger became famous for his experiment of teleporting, i.e. beaming. The transmission or beaming of people or things is still science fiction today but the transfer of information between

5 Interview with Prof. Dr. Anton Zeilinger at the German Broadcast Station Bayerischer Rundfunk, <https://www.br.de/fernsehen/ard-alpha/sendungen/alpha-forum/anton-zeilinger-gespraech100.html> (October 2022)

6 Explanation of Zeilinger's experiment on PNAS: Teleportation of entanglement over 143 km, <https://www.pnas.org/doi/10.1073/pnas.1517007112> (October 2022).

quantum computers is already being applied. Zeilinger has laid the foundation for this. He said:

“We can expect the world to be as crazy as Einstein hoped it wouldn’t be.”

Zeilinger gained great public attention by being awarded the Nobel Prize in Physics in 2022, alongside two other quantum physicists, for his many years of groundbreaking research.

For Schrödinger, quantum entanglement was the essential characteristic of quantum physics. He described it as the criterion that forces us to bid farewell to all cherished ideas about the nature of the world.

OLIVER SCHACKE:

The Dream

Life's roller coaster has sent me on a wild ride. It has lifted me to the highest peaks and made me rejoice at the top, plunged me into deep valleys where it was only dreary and dark, and made me do loops where I didn't know whether to laugh or cry. On many a stage I wanted nothing more than to get off, but the train made no stop. Every now and then, it also sent me over wide, flat plains and gave me time to catch my breath.

I reached such a plain when I was in my mid-twenties. It was after an incredible high, whose origin seemed increasingly wrong to me, aroused doubts and finally led to a self-boycott. The question of where my place is on this earth and what my purpose is initiated the realization that I wanted to encourage and help others instead of doing the opposite and wrestling with my guilty conscience, which even then effortlessly threw me to the ground and kept me in a headlock.

With the newly gained insight, I went on a search and began my spiritual education, which lasted several years and allowed me to grow. I met many interesting people, accompanied some of them

on their way for a while and tried to find my own way. Sometimes I had the feeling of being at home in five religions at the same time, of believing in ten different gods or in no god at all. I took the experiences as they came and tried not to judge anything, even if some of them were really crazy. I learned from others and also from myself. For me and my journey, the decisive factor was a conviction that I had encountered in every spiritual practice, be it in channeling, in spiritual healing or in Tai Chi: The higher the body's own energy and the stronger and more individual the frequency, the better the health, both physical and mental. The flu epidemic or worse can sweep through the country and knock everyone out, the icy wind of pessimism can blow, and armies of worries can march in – energy is the remedy for everything. That much I knew, but I didn't have that energy. Nor did I have any idea where it was to be found and in what form it was hiding.

I have always been ambitious and curious to the same degree. At that time for my own sake. So I decided to find it: the highest energy available worldwide, the creative power, so to speak. Today, I almost have to laugh when I think about where I first searched: on the Internet. I was actually convinced: If I would only do intensive research and evaluate the results of even the hundredth page presented to me by the search engine running at full speed, then I would find it. In the six months that I spent almost day after day searching, I found and tried quite a few things. There is probably no energetic product or technology from this field that I have not heard of. Some of them gave me a good experience and with it the courage to continue, but not a single technology provided what I imagined to be the highest energy available in the world. Above all, none of it was neutral; all of it contained specific frequencies: ...

A Miracle or the New Reality?

When you work with the 90.10. technology for the first time, the successes you experience every day seem like small and big miracles at first. That's how I felt in the beginning. However, the more I became involved in the method and the more routinely I applied it, the more it became my reality. Thus, every person can apply this technology in his or her life. After all, it is based on simple cosmic laws that apply equally to everyone and produce positive results with total certainty.

Particularly responsible for this is the Golden Ratio¹ with its mathematical-geometric proportion. It describes a relationship between two numbers, lengths or other quantities: The smaller one relates to the larger one as the larger one relates to the whole. The golden ratio has many names, now and then it is also called the "divine proportion". It is part of the Sacred Geometry.

Those who find it difficult to associate Sacred Geometry with quantum energy and frequency technology can visit certain places of power in nature. Among the most famous are Ayers Rock in Australia, Stonehenge in Great Britain, the Pyramids of Giza in Egypt, and the Nazca Lines in Peru. Places like these trigger certain reactions in the body and mind. They calm, soothe and allow the mind to rest. In addition, there are numerous churches and monasteries that have gained fame as places of power. Under their vaults and ceilings, all stress falls away from you. As if by itself, you feel good, like to stay a while and not only literally recharge your batteries.

1 The golden ratio explained by Tipping Point Math on YouTube, https://www.youtube.com/watch?v=6nSfJEDZ_WM (October 2022).

At each of these places, the law of the Golden Ratio applies. Everywhere, sometimes obvious, sometimes hidden in familiar forms, you can find the five-pointed star and the Flower of Life. Both are closely related to the Golden Ratio because they are contained in it. Under the influences of both, energy vortices and energy fields are established, which in turn, due to the structure or construction of the place, influence the organism and spirit, and either keep the visitors on track or bring them back on track.

But the Golden Ratio is not only present in these places. It can be found everywhere: in the blossom shape of the smallest flower, in the structure of the human body and even in the orbit of the planets around the sun. The fact that the law of Sacred Geometry is not, or only slightly, noticeable in everyday life is, among other things, due to the fact that the Golden Ratio has not been taken into account, for example, in the arrangement of buildings in a large city. In addition, various factors cause an interruption of its energy lines. These include electromagnetic radiation, pollutants and radioactivity. They trigger disturbing effects in the organism, which result in stress, fatigue, sleep disturbances, lack of concentration and low spirits, and as a consequence, after some time, can lead to critical physical problems.

Quantum energy generated with 90.10. technology supports the restoration of original structures based on the mathematical-geometrical formula from Sacred Geometry, which is used for its generation, bundling and focusing. Thus, it helps to reintegrate into the big whole and to maintain it. The harmony of microcosm and macrocosm thus achieved has a positive effect on all fields of life.

Due to the connection to the quantum field, in principle, there are no more limits, because through this matter and energy are connected with each other. However, there is the limit of the human imagination or a blockage stored in the consciousness of the individual, which has built up in the course of life through various influences. It is responsible for people not being able to imagine

a lot of things. Many cannot imagine that men can live 200 years, for example. They have, so to speak, made an agreement with themselves and consented to the fact that they will only live for a certain time, around eighty to ninety years. Because spirit basically rules over matter, such a way of thinking is an impediment to many developments that would actually be possible.

The authors

Anne Hild, alternative practitioner and classical homeopath, has been working for years on the importance and effect of hormones of hormones on our body and our well-being. As co-author of the book "Natural Hormone Therapy", she has written the standard German standard work on bioidentical hormones. In several successful books, Anne Hild has introduced the hCG diet in the German-speaking countries. She is the initiator of the web portal www.hormony.de.

Oliver Schacke is engaged in the fundamental laws of the universe and the possibilities of the primal energy, the creative power or quantum energy since the turn of the millennium. His aim was the extraction and focusing of this energy for the purpose of making it available. In 2011, after many years of seeking and investigating, he succeeded in this step. Since that time, he has developed various methods that enable everyone to use this energy for themselves in an uncomplicated way and to benefit from it. Through the principle of quantum entanglement, he recently also found a way to let his technology work in virtual space and access its infinite intelligence, which raises the possible applications and freedom of energy work ad infinitum. His company 90.10. can be found on the web at www.9010.com.

“The MedBed Effect” is available as a Print Book, downloadable PDF-document and audiobook, both in German and English.
